## INTRODUCTION

Thank you for purchasing your American Bass product. We take pride in delivering powerful high-performance sound systems engineered for exceptional volume and clarity—without compromising quality.

To get the most out of your product, please read this manual carefully before installation and use. It's especially important to review all safety precautions and setup guidelines. Be sure to keep this manual in a safe and accessible place for future reference.

## SAFETY INSTRUCTIONS

- **Secure Installation**

Mount the subwoofer securely. A loose subwoofer can become a serious hazard if it shifts or disconnects while driving.

- **Handle with Care**

If possible, keep the subwoofer in its original packaging until installation to prevent accidental damage.

- **Avoid Dropping**

Be cautious when handling the subwoofer. Dropping it can damage internal components.

- **Tool Safety**

Always follow proper safety procedures and wear protective gear when using tools.

- **Power Off Devices**

Turn off the head unit and all connected audio equipment before installation to prevent damage.

- **Check Placement**

Make sure the subwoofer does not obstruct or interfere with any mechanical or electrical components in the vehicle.

- **Avoid Harsh Environments**

Do not install the subwoofer in areas exposed to moisture, extreme temperatures, or dust.

Operating temperature range: +5°C (41°F) to +40°C (104°F)

If condensation occurs, allow the unit to dry completely before use.

# SPECIFICATIONS

## POWER HANDLING

<b>RMS Power (W)</b>	300	The continuous power a speaker or subwoofer can handle over time without damage. This is the most important number for matching amplifiers.
<b>MAX Power (W)</b>	600	The maximum power the unit can handle in short bursts. Not intended for sustained output.
<b>Sensitivity @1w/1m (dB)</b>	83.7	How loud the subwoofer plays with 1 watt of power measured at 1 meter away. Higher numbers mean greater loudness with less power.

## PERFORMANCE & SOUND CHARACTERISTICS

<b>Fo (Hz)</b>	33.6	Also called Fs or resonant frequency – the natural frequency at which the subwoofer’s cone moves most freely. Lower values mean deeper bass performance.
<b>Frequency Range</b>	30-500 Hz	The range of frequencies the subwoofer can effectively reproduce. Wider ranges mean more flexibility and detail in sound reproduction.

## DESIGN & MECHANICAL

<b>Size (Inch)</b>	10	The physical diameter of the driver (e.g., 6.5", 8", 10", 12", 15", 18"). Larger sizes generally offer deeper bass, smaller sizes more precise response.
<b>Voice Coil Size (Inch)</b>	2	The diameter of the voice coil, which affects heat handling and power capacity. Larger coils often mean better performance at high volumes.
<b>Voice Coil Wire</b>	EISV	The type of wire used in the coil, impacting heat resistance and durability. EISV and other high-temp wires improve reliability under stress.
<b>Surround Material</b>	Stitched Foam Surround	The flexible ring around the cone. Rubber is durable and good for high excursion; foam may offer smoother response but shorter lifespan.
<b>Cone</b>	Fiberglass Reinforced Paper	The materials used in the cone assembly. "Rubber edge" refers to the surround, and "paper cone" refers to the diaphragm. This combination balances durability with warm sound characteristics.
<b>Cone Material</b>	Paper	The material used for the cone affects sound signature. Paper is warm and natural, while polypropylene is durable and weather-resistant.
<b>Frame Material</b>	Heavy Duty Metal	The outer structure holding the motor and cone. Aluminum is light and rigid; steel is strong and cost-effective.

## MOTOR & MAGNET ASSEMBLY

<b>Magnet Type</b>	Ferrite	The motor’s magnet affects output strength and weight. Ferrite is traditional and strong; neodymium is lighter with high efficiency.
<b>Magnet Weight</b>	90	The magnet’s weight, typically in ounces or grams. Heavier magnets usually offer stronger motor force, which can improve bass output and control.

# THIELE-SMALL PARAMETERS

## POWER & SENSITIVITY

SPL (dB)	83.7	Sensitivity rating. Tells you how loud the sub plays with 1 watt of power. Higher is louder with less power.
Re (Ohm)	3.2	DC resistance of the voice coil – typically a bit lower than the nominal impedance. Helps with amplifier matching.

## CONE MOVEMENT & CONTROL

Xmax (mm)	12	Maximum cone excursion. How far the cone can move in one direction without distortion. More movement = deeper bass.
Qes	0.53	Electrical damping. Lower = tighter control from your amplifier.
Qms	5.89	Mechanical damping. Higher Qms = better mechanical control of cone movement.
BL	14.1	Magnetic strength of the motor. Higher = tighter, more controlled bass. Think of it as "torque" for your sub.
Mms (g)	158.3	Mass of the moving parts (cone, coil, suspension). Impacts how fast the cone can move. Lighter = more responsive; heavier = deeper bass.

## RESONANCE & BOX DESIGN

Fs (Hz)	33.6	Resonant frequency of the driver. Lower Fs = better for low bass. Ideal for deep subwoofer performance.
Vas (L)	21.6	Volume of air that has the same compliance as the sub's suspension. Used in box design. Lower Vas = smaller box needed.
Sd (sq.m)	330	Surface area of the cone. Bigger cone = more air moved = more bass.
Qts	0.49	Total Q factor (electrical + mechanical). Helps determine the best box type. <0.5 = sealed; 0.5–1.0 = ported; >1 = large sealed or specialty boxes.

## ELECTRONICS & INDUCTANCE

Le (mH)	1.76	Voice coil inductance. Affects how the sub behaves at higher frequencies. Lower Le = cleaner mids.
Impedance (Ohm)	4	Shows the electrical resistance of the subwoofer's voice coils. "4+4 Ohm" means dual voice coils that can be wired for flexibility (e.g. 2Ω or 8Ω total load).

# DX-104

## PRODUCT DIMENSIONS

Mounting Depth (inch)	5.52
Mounting Diameter (inch)	9.24
Sealed Box Volume (cubic feet)	N/A

# DX-104

## PORTED BOX FOR SINGLE 10 INCH SUBWOOFER

PARAMETERS	
External Dimensions (Width × Height × Depth)	Width × Height × Depth 16.00" × 12.00" × 18.78"
Material Thickness	0.75"
Net Internal Volume	1.04 ft <sup>3</sup>
Tuning Frequency	36 Hz
Port Area	16.7 inch <sup>2</sup>
Port Inlet (Width × Height)	1.59" × 10.50"
Port Length	28.31"

DETAIL	SIZE	QTY
Top / Bottom	16.00" × 18.78"	2
Front	13.66" × 10.50"	1
Rear	16.00" × 10.50"	1
Left	17.29" × 10.50"	1
Right	18.04" × 10.50"	1
Port	15.70" × 10.50"	1
Port	9.52" × 10.50"	1

# DX-104

## PORTED BOX FOR DOUBLE 10 INCH SUBWOOFER

### PARAMETERS

External Dimensions (Width × Height × Depth)	Width × Height × Depth 26.00" × 12.00" × 21.92"
Material Thickness	0.75"
Net Internal Volume	2.09 ft <sup>3</sup>
Tuning Frequency	36 Hz
Port Area	36.8 inch <sup>2</sup>
Port Inlet (Width × Height)	3.50" × 10.50"
Port Length	29.24"

### DETAIL

### SIZE

### QTY

Top / Bottom	26.00" × 21.92"	2
Front	21.75" × 10.50"	1
Rear	26.00" × 10.50"	1
Left	20.42" × 10.50"	1
Right	21.17" × 10.50"	1
Port	16.92" × 10.50"	1
Port	7.32" × 10.50"	1

## **WARNING!**

- These subs hit hard — please listen responsibly.
- Extended exposure to loud bass can cause hearing damage.
- Use caution when adjusting volume.
- American Bass is not liable for shattered glass, hearing loss, or related damage.
- Our subs are built for power. Use with care.
